Claim(s): 1, 6

Reference 1 teaches setting detection sensitivity according to an area set as an inspection area at the time of pattern inspection. Therefore, instead of detecting defects according to the detection sensitivity, it would have been readily realized by one of ordinary skill in the art to first detect possible defects and determine defects based on whether the possible defects are matched with the detection sensitivity.

Claim(s): 2, 7

In the invention taught in reference 1, it would have been appropriately done by one of ordinary skill in the art to determine how detection sensitivity to be set for each area is represented.

Claim (s): 5, 10

From the invention taught in reference 1, it can be recognized that sensitivity can be set for each area irrespective of patterns.
